Work Experience

May 2021 - July 2021

Software Developer Backend

BANKITY

| Remote

- Implemented the STRIPE API through NodeJS, to take advantage of functionality including transfers, balances, etc. for use by the app users.
- Managed cloud functions and database storage through Firebase.
- Connect information from Stripe Issuing to Firebase and likewise from Firebase to Stripe Issuing

DEC 2021 - CURRENTLY

Software Developer Android

Micasillero.com

| Freelance

- Design and implementation of mobile application for Android, using React-native and the consumption of the company's own API.
- Take the design and experience of the company's website and convey the same clean, simple and easy-to-use user experience.

PROJECTS

FirestoreAndStripeIssuingIntegrationWithNode.js

- Implemented the STRIPE API through NodeJS, to take advantage of functionality including transfers, balances, etc. for use by the app users.
- Managed cloud functions and database storage through Firebase.
- Connect information from Stripe Issuing to Firebase and likewise from Firebase to Stripe Issuing

headphones

- Another front-end implementation from scratch using only HTML & CSS with a heavy focus on mobile design.

smiling-school

- From scratch front-end implementation with the challenge of using as little CSS as possible in favor of bootstrap.
- Later version includes dynamic content loading with JavaScript.

projectN

- project focused on applying knowledge of Node.js, express.js and other frameworks
- Includes HTML and CSS
