Professional Summary

I am a backend developer with extensive experience in Node.js, MongoDB, and cybersecurity. I have worked in startups and established companies, developing scalable APIs, secure payment solutions, and financial system integrations. I specialize in performance optimization, application security, and cloud architectures.

Work Experience

Backend Developer | Bankity (Remote)

May 2021 - Jul 2021

- Implemented Stripe API with Node.js to manage payments, transfers, and real-time balances, ensuring secure transactions and compliance with financial regulations.
- Designed a cloud-based architecture using Firebase for data storage, ensuring efficient integration with external systems.
- Optimized payment processing, reducing wait times by 35% through caching and asynchronous processing.
- Collaborated with engineers to enhance data security by implementing advanced encryption and multi-factor authentication.

Freelance Developer | Micasillero.com

Dic 2021 - Actualidad

- Led the development of a mobile application in React Native, optimizing user experience and ensuring compatibility with multiple Android devices.
- Designed and implemented a custom API for secure user management and authentication.
- Improved app performance by 40% through database query optimization and reduced memory consumption.
- Implemented cloud service integration for real-time data storage and processing.

Education

Software Development | Holberton School (2020 - 2022)

Training in full-stack development, backend with Python and Node.js, network security, and DevOps.
